

## Cloud File Storage

**Gurulocker provides file sync between PCs and mobile devices. Gurulocker enables business users to sync sensitive corporate files between laptops, desktops, smartphones, tablets, and the web. Gurulocker makes it possible for users to access all of their files on any device and to collaborate with colleagues, clients, and business partners.**

Gurulocker unleashes the power of mobility and maximizes the BYOD trend. Despite a diverse computing environment, gurulocker lets users be productive with their files, while giving essential control and visibility to administrators and business owners.

Unlike most consumer-grade file sync services such as Dropbox, gurulocker keeps business files safe by arming administrators with robust security and control features. Organizations can limit or control which devices are permitted to sync; completely audit file syncs and changes; remotely wipe the data from devices that are lost or stolen; and monitor and manage how employees are using their mobile devices.

### SIMPLE & ELEGANT USER INTERFACE

- Sharing, editing, collaborating and restoring lost files from the cloud has never been easier.
- Synced Folder also offers a drag and drop features for even greater convenience.
- The desktop and mobile application gives direct access to your Synced Folder through a folder on your hard drive.

### ENTERPRISE SECURITY

- 448-bit Blowfish encryption, on-device and in-transit
- Encryption key management
- Remote wipes of desktops and devices

### UNIVERSAL FILE ACCESS

- Freedom to access and sync files from mobile phones across all operating systems (Android, Blackberry, Apple, Windows, Symbian and More)

### GUEST ACCOUNT/UPLOAD FEATURE

- Share folders with a guest
- Determine whether guests can upload, delete or edit files to the folder
- Set expiration dates for folders shared with guests
- Ability to restore files deleted by guests

### CENTRALLY ADMINISTERED USER DASHBOARD

- Administer all your users from one central, intuitive dashboard.
- Set company-specific usage limits
- Track data usage and gain access to comprehensive usage reports

### DATA RESTORATION FROM ANY REVISION

- Backup and archive data so it may be used to restore the original when data is lost.

### CLOUD ENABLED FILE SERVER

The File server enablement feature allows Users to map an existing directory

structure on a file server to the cloud. You can map folders to User accounts within Synced Folder or map folders to Team Shares within Synced Folder without having to move the folders on your file server. This means that users in the office or on the network can still use their mapped drives to access files on the file server, but when they are out of the office they get the full benefits of the cloud: access anywhere, ability to share, etc.

- Two-factor authentication now supports email and SMS
- Ability to send welcome email to AD users
- During registration, agent prompts user if files already exist in sync folder
- Activity logs now show the machine that the action was initiated on
- View activity for a particular file from the web
- No longer showing disabled AD accounts during import
- Improved space usage information on company and account dashboard
- Advanced e-mail settings (support for TLS)
- Set policies at the All Organization level
- Active Directory import improvements

### MICROSOFT OUTLOOK PLUGIN

- Share files directly from Microsoft Outlook
- Receive notifications when files have been downloaded
- Set download limits
- Set share expiration dates
